Terms & Condition:

- Sales: First come first serve basis
- Payment: 100% in advance
- Delivery: As-Is, Where is basis
- Ownership transfer: After confirming full payment receipt in our bank account
- Shipping document Processing time: 3days after receiving full payment

For Inquiry : Call/WhatsApp: +971-05-641-65205 / +971-50-708-2127

ZX-5D not complaint with any emission control regulation

HITACHI

Reliable solutions

ZAXIS-5B / Stage IIIB-compliant engine

ZAXIS 5B series equips Diesel Particulate Filter (DPF) to capture air pollutants which is automatically burnt by an oxidation catalyst and exhaust temperature control..

The **variable geometry turbocharger and high volume-cooled EGR (Exhaust Gas Recirculation) system** also help to reduce nitrous oxide.

ZAXIS-5D / not complaint with any emission control regulation

ZAXIS 5D series is modified ZAXIS 5B which DPF and EGR system are removed by Hitachi authorized dealers to allow the machines operate in the market where there is no access to an ultra low sulfur fuel. 5D model machine maintains the benefits of 5B model – fuel consumption and performance.

*5D stands for 5B model which has completed "De-Tier" modification

"D edition" as a proof of 5D model

ZX-5D not complaint with any emission control regulation

What is “5D” model?

ZAXIS-5B - Interim Tier 4 / Stage IIIB

The machine that equips DPF is designed to operate by using the ultra-low sulfur fuel (under 15ppm), so a filter contamination will be occurred earlier due to high sulfur fuel and causing regeneration error without removing DPF.

Export

ZAXIS-5D - Tier 0

We recommend removing DPF to operate the machine under high sulfur fuel and without any emission regulation existing.

*After De-Tier, the machine is not complied with any emission regulation, so please check and confirm your market regulation before operating the machine.

ZX-5D not complaint with any emission control regulation

PERFORMANCE & PRODUCTIVITY

Fuel consumption

PWR mode 17% reduced

ECO mode 25% reduced

*20t class, VS ZX200-3 P mode

"TRIAS" Hydraulic system

The hydraulic system "TRIAS" is equipped with **three pumps** that supply an adequate amount of pressurized oil to each actuator, resulting in **high hydraulic efficiency** as well as **low fuel consumption**.

Power boost with a difference

Our long-popular power boost feature has been increased by **10%** over normal mode for the new ZAXIS with the aim of having the operator feel the difference during excavation work.

ZX-5D not complaint with any emission control regulation

COMFORT & DURABILITY

New multi-function LCD monitor

Large seven-inch screen that is easy to view. It provides a wide range of useful technical information, including a clear indication of the machine's status and settings with multi-lingual support in up to 32 languages. The monitor and ergonomically designed switches have been grouped together within easy reach of your right hand.

ROPS-compliant cab

The pressurized and ROPS-compliant CRES V (Center pillar reinforced structure) cab prevents the penetration of dust and protects you from the potential risks of the job site.

The Roll-over Protective Structure (ROPS) is designed to protect the operator in the unlikely event of the machine tipping or rolling over.

THANK YOU
